Residential Backflow Preventers

To Whom It May Concern:

Please be advised that effective January 1, 2007, any residential premise that is sold, must have a dual check backflow preventer installed prior to closing. In accordance with the Authority's cross connection control policy compliance shall be as follows:

- At least 2 weeks prior to closing the seller shall contact the Authority and schedule an appointment for an Authority serviceman to visit the premise and verify if the premise has an approved backflow preventer. (This service is provided for a \$10 fee).
- If the premise has an approved backflow preventer the Authority serviceman will complete and submit the necessary paperwork to the Authority.
- If the premise does not have an approved backflow preventer (dual check valve and thermal expansion tank), you will be immediately notified and informed to contact a registered master plumber for installation.
- After installation, the plumber shall complete the installation form on the back of this letter then contact the Authority for an inspection. The inspection of the new device must be made a minimum of 2 days prior to closing.

Failure to submit the necessary installation/certification form within the time periods specified would leave the Authority no choice but to terminate the water service until compliance is achieved.

If you have any questions regarding this letter, please contact the Authority office at 412-486-4867.

Samuel Scarfone
Executive Director

NOTE: Certification/installation forms for backflow preventers are available at the Authority office, Deer Creek Drainage Basin Authority office, O'Hara Township Building, West Deer Township Building, Indiana Township Building or at www.hswa-pa.org.
